VD53 QUARTZ

GENERAL

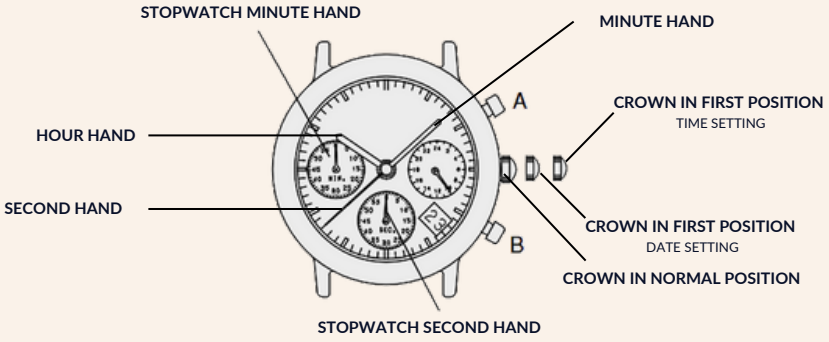
QUARTZ HORLOGES

Quartz watches are known for their precision and ease of use. These watches are powered by a small battery that drives a quartz crystal, allowing the watch to measure time very accurately. Unlike automatic watches, quartz watches do not require winding by movement or manual winding.

When you buy a new quartz watch or replace the battery, all you have to do is set the time and date by turning the crown. The battery in a quartz watch usually lasts between 1 and 3 years. It is important to replace the battery as soon as it is empty to prevent leakage that could damage the timepiece. Quartz watches are ideal for people who want a reliable and low-maintenance watch, without having to worry about daily wearing requirements or regular winding of the watch.

SETTING TIME

1. Pull the crown out to the first position.
2. Turn the crown clockwise until the next day's date appears.
3. Pull the crown out to the second position when the second hand is at 12 o'clock. The crown will stop and by turning the crown the hour and minute hands will move.
4. Push the crown back to the normal position according to a time signal.
5. Do not set the date between 9:00 P.M. and 1:00 A.M. Otherwise, the day may not change correctly.
6. If it is necessary to set the date within that period, first change the time to a time outside it, set the date, and then reset the correct time.



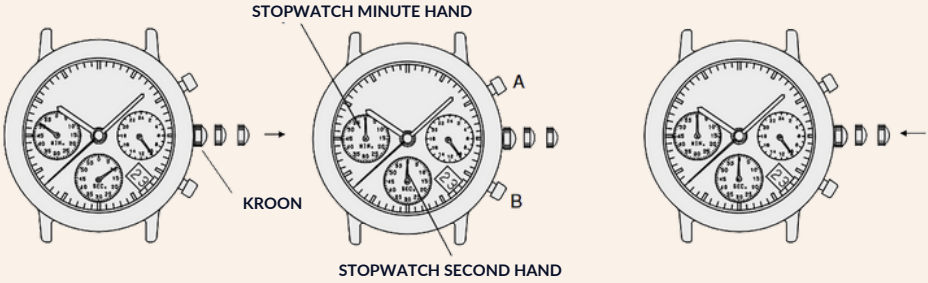
GENERAL

CORRECT STOPWATCH INITIAL VALUE

If any of the stopwatch hands are not in the "0" position, reset them according to the procedure below.

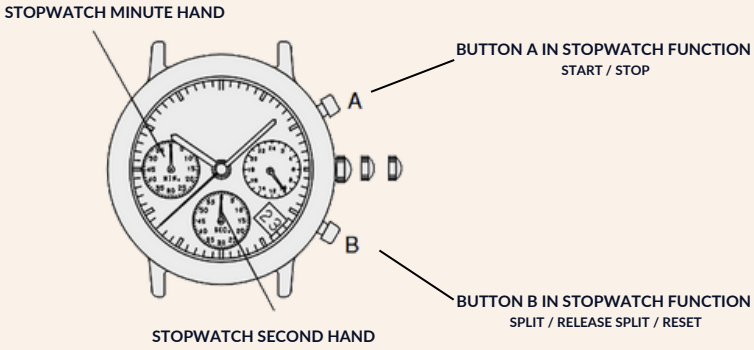
1. Pull the crown out to the second click.
2. Press the A or B button to reset the stopwatch second and minute hands to the “0” position.

*Pressing A moves the hands counterclockwise.
*Pressing B moves the hands clockwise.



STOPWATCH

1. Activate the stopwatch by pressing button A.
2. You pause the stopwatch by pressing button A again.
3. Reset the stopwatch after it has been paused by pressing button B.



MAINTENANCE

AVOID HARMFUL CHEMICALS, SOLVENTS AND GASES

1. Do not wear your watch in the presence of strong chemicals, solvents or gases.
2. Avoid contact with materials such as gasoline, gasoline, paint thinner, alcohol, spray cosmetics, nail polish, nail polish remover, glues or paint.

AVOID WET CONDITIONS

1. Do not operate the buttons when your watch is wet, even on models labeled 'Water Resistant'.
2. Check the markings on the back of the case and refer to the section on resistance to water.

AVOID HARD SHOCKS

1. This watch can withstand the impacts normally encountered during sports activities.
2. Do not drop your watch on the ground or give it other hard impacts.

AVOID STRONG MAGNETIC FIELDS

1. Keep your watch away from strong magnets.
2. In general, your watch is not affected by magnetic fields from household appliances such as televisions and stereo equipment.

AVOID EXTREME TEMPERATURES

1. Do not leave your watch in direct sunlight or in extremely hot conditions for long periods of time, as this may cause malfunctions and shorten battery life.
2. Do not leave your watch in extremely cold places for a long time; this can cause your watch to gain or lose time. If it starts to deviate, wear the watch on your wrist to restore the original accuracy.

PERIODIC INSPECTION

1. Regular servicing of 1 to 2 years by an authorized technician ensures trouble-free operation.
2. Please refer to the After Sales Service section for more details.

IMPORTANT

1. Keep the batteries out of the reach of babies and small children. If accidental swallowing occurs, consult a doctor immediately.
2. Do not attempt to replace the battery yourself as this will void your warranty.

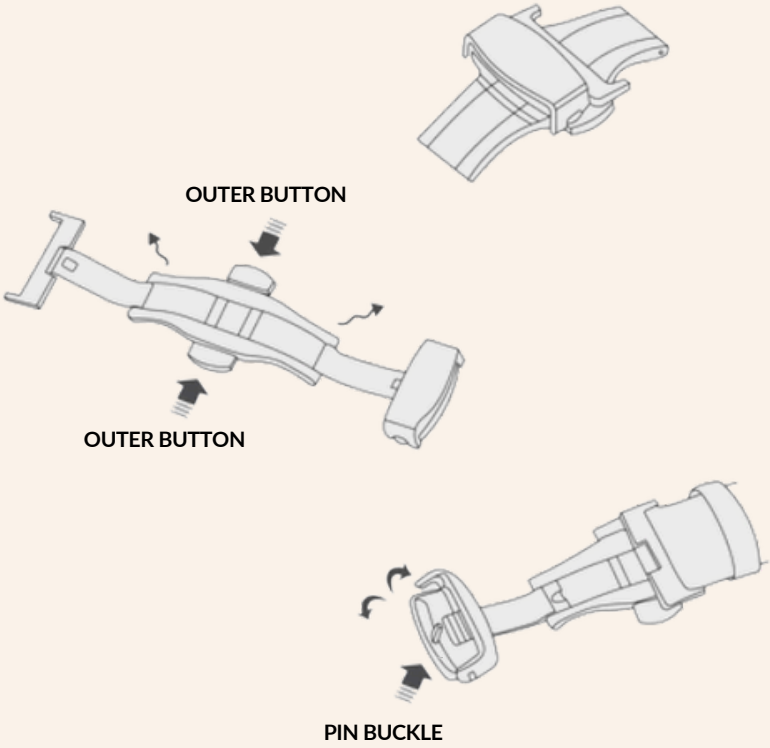
KEEP YOUR WATCH CLEAN

1. Wipe away any moisture that may cling to the case, glass, or band with a soft, clean cloth.

WATCH STRAP

OPEN AND CLOSE STRAP

1. Press the outer buttons in the center of the closure to open it.
2. Open the pin buckle closure with your fingers by pushing apart the top and bottom where the pin is located.
3. Place the pin through the hole in the strap that matches your size and close the buckle.
4. Put the watch on your wrist and fold the two outer parts of the clasp towards the center until you hear a click and the clasp is secured.
5. Place the end of the leather strap through the holders so that it stays in place.



WATER RESISTANCE

NEVER OPERATE THE BUTTONS WHEN YOUR WATCH IS WET

Water resistance is not a permanent property. We strongly recommend that you return your watch for hermetic sealing every 4 - 5 years and/or when replacing batteries. "Water resistant" can sometimes be abbreviated as "Water resist" or "WR". Never pull out the crown when the watch is wet. Always insert the crown
the normal position.

	SPLASH-RESISTANT	SUBMERSIBLE	SHALLOW DIVING	TO DIVE
3ATM 3BAR 30 METER	♦	♦	♦	♦
5ATM 5BAR 50 METER		♦	♦	♦
10ATM 10BAR 100 METER			♦	♦
20ATM 20BAR 200 METER				♦

The Parivoir Vault has a water resistance of 5ATM.

WEEE DIRECTIVE

WEEE DIRECTIVE

The crossed out waste bin icon indicates that used electrical and electronic equipment should not be mixed with general household waste. There is a separate collection point for these products. The objectives of the community's environmental policy are, in particular, to preserve, protect and improve the quality of the environment, to protect human health and to use natural resources wisely and rationally.

DISPOSAL INFORMATION FOR CONSUMERS IN EU COUNTRIES

In accordance with legislation requiring proper treatment, recovery and recycling of used electrical and electronic equipment, private households within the EU can return their used electrical and electronic equipment free of charge to designated collection points. You can also return your product to a point of sale or the PARIVOIR head office. They then take care of the removal of the product. Contact your authority for more information.

NON-EU COUNTRIES

If you wish to discard this product, please contact your local authorities and ask for the correct method of disposal. Otherwise, you can return the product to PARIVOIR headquarters, they will take care of the disposal of the product.
